The cost of the modules

mullein 35m2 ;

PLN 48,000 net, VAT 23% PLN 59,040 gross

Installation

The modules are mounted using carpenter's screws, screwing together the elements of the modules, which are fitted with an overlap. The weight of the modules does not exceed 150 kg, so we recommend using HDS or a light lifting device with a lift up to 6 m for assembly.

Support:

- selection of materials and technologies to finish the house in a closed state.
- at the architectural level (we also prepare an individual architectural design for the client's needs and adaptation to the plot).

What is included in the Dziewanna house design

- Architectural and construction project
- Technical project
- Free consent to changes
- A copy of the licenses of architects and tradespeople
- Energy performance (for house projects)

Transport

We organize transport in the country and abroad. Estimated transportation cost

- PLN 6/km
- 1 truck
- the cost of sea transport after specifying the destination port.
